

MANAGED IT SERVICES

Managed IT Services

A structured approach to managing business technology.

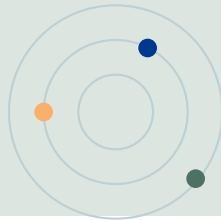

Intrinsic provides ongoing management across your technology environment so your people can stay productive, operations can run reliably, and your business can move forward.

Reliable
technology
for what is next.

A COMPLETE IT MANAGEMENT FUNCTION

Responsibility across the technology environment.

From day-to-day support to long-term planning, Intrinsic brings together the people, processes, and technology needed to operate, maintain, secure, and develop the interconnected systems that keep your business running.

Service & User Support

Responsive help desk support for users, devices, applications, access requests, and the issues that interrupt daily work.

NOC & Infrastructure

Around-the-clock monitoring, routine maintenance, patching, and escalation across servers, networks, and core systems.

Cybersecurity

Coordinated identity, endpoint, email, and network protection, supported by monitoring and defined response processes.

Cloud & Microsoft 365

Administration of Microsoft 365 and cloud services, including configuration, access, collaboration, and platform health.

Backup & Continuity

Managed backups, recovery checks, and continuity planning to help restore systems and operations when disruption occurs.

vCIO & vCISO

Ongoing technology and security leadership: roadmaps, risk priorities, budgets, governance, and executive reviews.

Flexible engagement. Consistent results.

Managed IT

We manage service, infrastructure, security, cloud, and strategic resources required to support your business.

Co-Managed IT

We extend your IT team with capacity, expertise, and tools while maintaining clear responsibilities.

OPERATIONAL EXCELLENCE

Continuous oversight through the NOC.

Our Network Operations Center (NOC) provides 24/7 monitoring and operational oversight across your environment. Systems and infrastructure are monitored for conditions affecting availability, performance, system health, patch status, and backup operations.

Alerts are evaluated, prioritized, and escalated to the right technical resources. Intrinsic connects monitoring with investigation, remediation, and follow-through so identified issues receive an accountable response.

BUSINESS OUTCOMES

From day-to-day operations to informed technology decisions.

A managed IT service should provide more than a record of issues resolved. Intrinsic reviews service activity, infrastructure, security, and the technology lifecycle to identify recurring issues, emerging risks, and priorities for action.

Regular reviews turn findings into priorities for remediation, upgrades, stronger controls, and technology investment. Intrinsic tracks these actions through the appropriate service and leadership reviews.

Clearer
insight.

Stronger
decisions.

LET'S TALK

A technology environment that supports what is next.

Every organization is different. Let us discuss your environment, priorities, and how Intrinsic can help.
